Declaration of compliance

Quality: Polyethylene freezer bags; First Price 2, 4, and 8 liters

Compliance with food contact legislation
In manufacturing this product, we comply with the requirements on good manufacturing practices as laid down in Regulation (EC) 2023/2006. Furthermore, the raw materials of our product are declared suitable for food contact use. Consequently, the product is considered to comply with the general safety requirements of Regulation (EC) 1935/2004. We also comply with the provisions on labelling (Art.15), declaration of compliance (Art.16) and traceability (Art.17) as provided in Regulation (EC) 1935/2004.

Overall Migration Limit
As laid down in Regulation (EC) 10/2011, and its amendments; 321/2011, 1282/2011, 1183/2012, 202/2014, 2015/174, 2016/1416, 2017/752, 2019/37, 2019/1338, 2020/1245, 2023/1442, 2023/1627, 2024/3190, and 2025/351 plastic materials in contact with foodstuff are subjected to an Overall Migration Limit (OML) of 10 mg/dm^2 (Art.12). Test conditions and simulants are specified in Annex V of Regulation 10/2011.

The overall migration of relevant samples is tested, according to test procedure EN 1186, with food simulant A (10% ethanol), B (3% acetic acid) and D2 (olive oil) at 60°C in 10 days. The ratio, of the food contact surface area to volume used to establish the compliance of the packaging film, is 6 dm^2/kg.

The test results of the overall migration at 60°C in 10 days are all well below the threshold value of 10 mg/dm^2, (Note test temp. 60°C = worse case).

This proves the suitability, according to Annex V of Regulation (EC) 10/2011, of this product for contact with all types of food (watery-, acid-, alcoholic- and fatty foods) and for indefinite storage time at refrigerated and frozen conditions and at room temperature, including heating up to 70°C for up to 2 hours, or heating up to approx. 100°C for up to 15 minutes.

Specific restrictions on substances in plastics
This product contains monomers and additives regulated by Regulation (EC) 10/2011. Substances with specific migration limits are listed below (Table 1).

Name	CAS No	PIM	Restriction SML
1-octene	0000111-66-0	22660	15 mg/kg
1-hexene	0000592-41-6	18820	3 mg/kg
Octadecyl-3-(3,5-ditertbutyl-4-hydroxyphenyl) propionate	0002082-79-3	68320	6 mg/kg
Zink		Annex II	5 mg/kg
Aluminium		Annex II	1 mg/kg

Table 1

Tests made by the supplier show that migration limits are not exceeded.
Calculation based on “Worst case scenario”, state that specific migration limits (SML) for the non-fatty food simulants 3% acetic acid and 10% ethanol and for the fatty food stimulant olive oil, are not exceeded in < 0.200 mm thick film.

The above list of restricted substances with a specific migration limit is complete to the extent that accurate information is received from our raw material suppliers.

Dual Use Additives
In accordance with Regulation (EC) 10/2011 the following list (Table 2) identifies additives (“dual use” substances), which are authorised as food additives and flavourings. None of the substances migrate into foodstuff in quantities exceeding the restriction in Regulation (EC) 1333/2008 and 1334/2008.

Food additive	Name	CAS No	PIM
E553B	Talc	0014807-96-6	92080

Table 2

PFAS
Our suppliers of raw materials have confirmed that PFAS, PFOS or PFOA is not intentionally added to the resins or additives that we are supplied.
We hereby confirm that we do not intentionally add materials containing perfluoroalkyl and polyfluoroalkyl substances (PFAS), including perfluorooctane sulfonate (PFOS), and perfluorooctanoic acid (PFOA).

Packaging and packaging waste
We do comply with Regulation (EC) 2025/40 and are registered in the national producer responsibility register.

Bisphenol
We hereby confirm that we do not intentionally add any bisphenols, salts from bisphenols or derivatives from bisphenols which are of concern in the amendment 2024/3190 to Regulation (EC) 10/2011.

Phthalate
We hereby confirm that there are no phthalates in our products according to Regulation (EC) 2005/84.

Metals
We hereby confirm that the contents of Lead, Cadmium, Mercury, and Hexavalent Chromium in the product do not exceed the value of 100 ppm. This statement is based on information from our raw material suppliers.

NIAS
Our products have a high degree of purity for their intended use. We use raw materials and additives with no intended added PFAS in the production of food contact products. Recycled polyethylene used for the bags does only consists of PIR material in the form of off-cut from our food contact material production, this implicates that the polyethylene bags have a high degree of purity. We have dedicated resources to follow and ensure that the products comply with Regulation (EC) 2025/351.

REACH, SVHC and SCIP
We hereby confirm that our products meet the REACH chemical requirements of Regulation (EC) 1907/2006. As a Downstream user, we have statements from our suppliers that required substances have been pre-registered in due time and registered in the ECHA SCIP database.
Statement from our suppliers announce that the amount of SVHC, according to Annex XIV, where it states that no listed substances in the candidate list is identified at a greater level than 0,1% (w/w).
